Pricing and freight, set once

Turf, segments, volume breaks, freight by postcode and customer deals, applied on every order.

Turfware

On most farms one person works out the price, and it's right as long as they're in the office. In Turfware you set your pricing once. Pick the customer and the quantity on an order, and the price fills in, freight included.

A segment: the blanket discount, laying rates and special pricing for a customer type.

What you set up

Turf varieties

Each variety has a retail price and a cost price per square metre, its unit (roll or slab), square metres per pallet and weight per square metre.

Segments

Wholesale, reseller, retail, trade or your own. Each carries a discount off retail, laying rates, and optional special prices for particular varieties.

Volume pricing

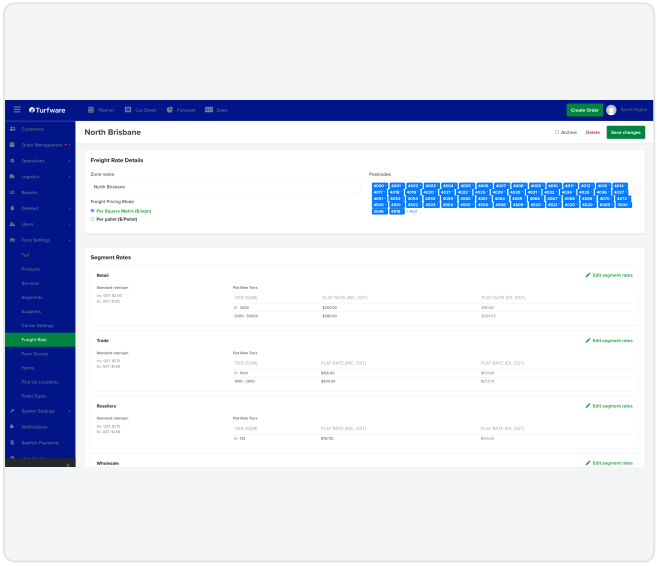

Set order-size ranges, for example 0–100, 100–500 and 500 m² plus, and a rate per range for each segment.

Freight zones

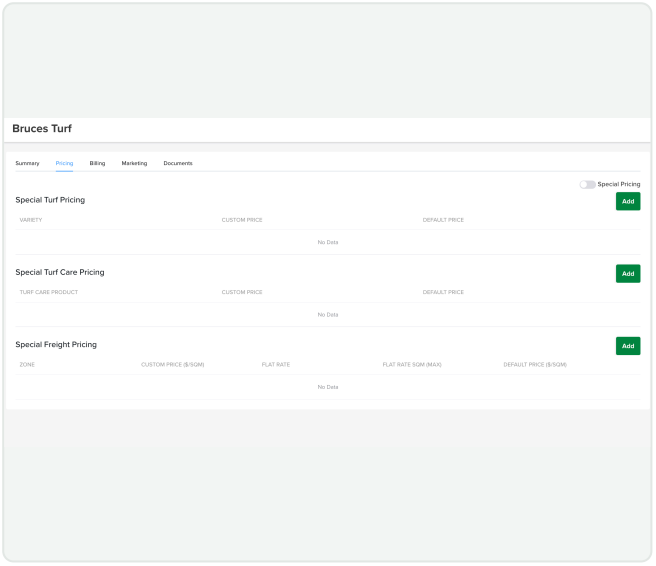

Define each zone by the postcodes it covers. Price it per square metre or per pallet, with a rate and flat-rate tiers for each segment.

On the order

1. Pick the customer. Their segment and sales person fill in.
2. Add the turf and the square metres. The price comes from the variety, the segment and the volume break.
3. Enter the delivery address. The freight fills in from the zone the postcode falls in.
4. Need to adjust? Override the freight for this order, or add a discount on any line. The discount shows on the invoice.

A freight zone: postcodes, pricing mode and rates by segment.

A customer's own pricing: turf, turf care and freight.

The result

- A customer's own deal sits on the customer and overrides everything else.
- Same price on a Tuesday as on a Saturday, whoever takes the order.
- Cost prices on each variety feed margin reporting.
